Meeting Prep Sheet - Steel Container Manufacturing Odoo Engagement

Muhammad Usman Khan | July 2026 | Internal use only

1-Page Leave-Behind Summary (Verbal Pitch)

This engagement is discovery first, software second. Your production spans material prep through shipping with real handoffs, leftover sheet reuse, and teams on spreadsheets and walkie-talkies. I will personally run structured interviews with your supervisors, map your stages into Odoo work centers and routings, and configure MRP, Inventory, Purchase, Quality, Maintenance, Timesheets, and Barcode - with KPI dashboards inside Odoo. Phase 1 produces a signed-off blueprint; Phase 2 configures and pilots one product line before full rollout.

Your Need	My Proof
Discovery with shop floor	4-week framework; I lead all interviews personally
MRP / work centers / BOMs	Partsnord (automotive parts), MRP II patterns, Product Configurator
Quality + Maintenance + Barcode	QMS, CMMS, Warehouse Automation Suite (13 inventory modules)
Leftover sheet metal reuse	Flexible consumption rules, scrap locations, batch traceability
KPI dashboards	Plectar: 413+ hrs, Odoo Spreadsheets, 5.0 rating
Production status pipeline	Workshop job-shop parallel: Pending → stages → Shipped
Phase 2 second business unit	Multi-company setup, parallel routing templates

Key Talking Points - Say These Out Loud

"I've done discovery before configuration on every manufacturing-adjacent project. Nothing gets built in Odoo until your supervisors sign off on the process map."

"Your leftover sheet metal problem is an inventory rules problem, not an MRP limitation."

"I will personally run supervisor interviews - not delegate to a junior."

"My Plectar engagement proves I build the dashboards management actually uses - 413 hours, consistently rated 5.0."

"Partsnord gives me live automotive/discrete manufacturing context right now."

"We'll pilot one product line first before rolling out to your full product catalog."

Questions to Ask Them

- Which product line should be the pilot for Phase 1?

- Do you have existing BOMs in spreadsheets today?
- How many work centers and shifts per production stage?
- Is barcode hardware already in use, or starting from scratch?
- Odoo edition and hosting - Community vs. Enterprise? On-prem vs. Odoo.sh?
- Target go-live date and preferred budget model (hourly vs. fixed price)?
- Can you share your internal discovery framework before Week 1?
- Who are the key stakeholders per stage for Week 1–2 interviews?

Objection Handling

If they say...	Respond with...
"We've tried ERP before and adoption failed"	"That's why I start with discovery and a pilot product line. Champions per stage, not big-bang rollout."
"Odoo can't handle our leftover sheet reuse"	"Flexible consumption rules, scrap locations, and alternative components handle this."
"We need someone local / on-site"	"Discovery Week 1 benefits from on-site walkthrough. Ongoing config works effectively remote with weekly demos."
"What's your rate?"	"$22/hour discovery phase, $24/hour standard. Recommend capping Phase 1 hours for budget certainty."
"Do you work solo or with a team?"	"I personally lead discovery and configuration. CODCrafters bench available if scope needs acceleration."

Meeting Close - Propose These Next Steps

1. They share internal discovery framework → you review within 48 hours
2. Confirm hourly vs. fixed budget and target go-live
3. Schedule Week 1 facility walkthrough + supervisor interviews
4. Agree on pilot product line for first routing/BOM
