CLIVORA

Status Report — What’s Done & What’s Next

Version **2.15.0 (+72)** · Web + Android · July 11, 2026

CODCrafters · clivora.codcrafters.org · GitHub UsmanGhias/clivora

This document summarizes everything shipped through **v2.13** → **v2.15**, live ops (Supabase cron, promo, Vercel), download links, and recommended next improvements — without replacing Supabase / Flutter / Next.js with third-party platforms.

1. Quick verdict

CLIVORA is past “CRM + marketplace MVP.” Connect trust (ratings, reputation, milestones), cloud CRM, Play Billing + web checkout, Hub KPIs, referrals, and automated invoice reminders are live. Highest-value unfinished items are mostly **ops secrets** (Stripe keys, Google OAuth consent publish) or deeper product work (real RAG, Stripe Connect escrow funding) — not missing foundations.

2. Downloads (GitHub release)

3. What’s done — product

3.1 Connect marketplace & trust (v2.13–2.14)

- Talent / Jobs / Inbox on web and Android (Pro Plus for contact/post)
- Private contact until mutual accept; emails via connect_request_details
- Reviews (1–5), proposals, milestones status machine (pending→funded→released/disputed)
- Escrow ledger table + admin release API (status/ledger; not live Stripe money yet)
- Star ratings, review counts, “New” badge on talent cards (web + Android)
- Reputation score + sort (Featured / Top rated / Newest); completion rate; member since
- Profile completeness meter on Connect manage + ranking boost
- Verified badge (admin-granted) surfaced on cards

3.2 CRM, sync, messaging, meetings (v2.13)

- Cloud CRM: clients, projects (kanban), invoices, custom fields
- Offline SQLite (Drift) + sync outbox; invoice + project/customer conflict dialogs
- Messaging threads + read receipts (web); image attach on Android chat
- Timesheets approve/reject (web); Jitsi meeting links
- Support tickets; Ask AI Hub widget (stub RAG over crm_embeddings)

3.3 Billing & growth (v2.14–2.15)

- Android: Google Play Billing Pro ($9) / Pro Plus ($19) — 4 SKUs; server verify edge function
- Web: JazzCash/Easypaisa/bank payment requests + optional Stripe Checkout stub
- No re-pay when already on plan (web + app logic)
- Referrals: Flutter + web /app/referrals; promo_codes; CLIVORA15 live (15%, max 50)
- Invoice payment reminders: Edge Function + daily pg_cron 08:00 UTC (batch 40, +3d dedupe)
- Hub live KPIs: overdue invoices, pending Connect, profile completeness %
- Proposal Accept → auto kickoff milestone
- Stripe Customer Portal route + Manage Billing button (activates when STRIPE_SECRET_KEY set)

3.4 Docs, ops, releases

- Public /docs changelog + Connect guide; internal research vs shipped matrix
- Google Play payments account IDs documented (merchant profile)
- Vercel production READY on clivora.codcrafters.org (build fixed)
- GitHub releases: v2.13.0-playstore and v2.15.0-playstore with APK/AAB
- Branches: cursor/pro-plus-web-v2-7-1-d928 → monorepo; clivora-web main mirror

4. Architecture (current)

Supabase = cloud source of truth (Auth, Postgres RLS, Edge Functions, Vault, pg_cron).
Flutter Android = offline CRM + Play Billing + Connect.
Next.js web = marketing, /connect, /app CRM, /pro checkout, admin.
Do **not** vendor Keycloak / Rocket.Chat / Discourse / Twenty as platforms — borrow UX patterns only.

Layer	Choice	Notes
Auth	Supabase Auth + Google	Native Google on Android; web OAuth
DB	Postgres + RLS	connect_*, crm_*, subscriptions
Mobile cache	SQLite / Drift	Outbox + conflict UI
Payments	Play + JazzCash (+ Stripe stub)	Low-cost default
Email	Resend via Edge Functions	Reminders + transactional
Search	Postgres ilike	Meili optional later
Meetings	Jitsi links	No self-hosted SFU cost

5. Ops checklist status

Item	Status
Promo CLIVORA15 active	Done
Daily reminder cron (08:00 UTC)	Done · smoke HTTP 200
send-invoice-reminders deployed	Done
Vercel production build	Done · READY
RESEND_API_KEY / RESEND_FROM on functions	Confirm in Dashboard if emails silent
SUPABASE_SERVICE_ROLE_KEY on Vercel	Paste if admin/grants/escrow APIs fail
STRIPE_* on Vercel	Optional — only for card Checkout/Portal
Google OAuth consent App name = CLIVORA	Manual Google Cloud publish
Play Console: 4 subscription SKUs Active	Manual — merchant ID already on file

6. What I recommend next (ranked)

Prioritize trust + revenue with low infra cost. Avoid hosting Keycloak/Rocket.Chat/Metabase unless you have a clear ops budget.

P0 — finish conversion & trust (cheap)

- Publish Google OAuth consent as “CLIVORA” (config only — removes supabase.co branding confusion)
- Confirm Resend domain + reminder emails in a real overdue invoice test
- Set SUPABASE_SERVICE_ROLE_KEY on Vercel for admin grant/escrow APIs
- Ensure all 4 Play subscription SKUs Active + license testers; upload AAB to Internal testing

P1 — money paths (only if you need cards)

- Add STRIPE_SECRET_KEY + Price IDs → live Checkout + Customer Portal (already coded)
- Defer Stripe Connect escrow funding until volume justifies compliance; keep milestone status UX
- Wire promo_codes discounts into Stripe coupons only when Stripe is live

P2 — product depth (native, no new platforms)

- Client dashboard “needs action” parity (pending approvals + unpaid invoices)
- Freelancer portfolio gallery on Connect profiles (photos/work samples)
- Saved Connect searches + weekly email digest (reuse Resend + a small table)
- Real RAG: embed CRM text on write into crm_embeddings; replace Ask AI stub (needs LLM API key)
- Dispute / support flow linking support_tickets ↔ milestones
- Recurring invoices on web (parity with Android)

P3 — later / growth

- Meilisearch only if Connect inventory grows large (Postgres is fine now)
- Urdu/English i18n coverage on web + remaining Flutter screens
- Team seats invite→accept→ACL completion
- SEO blog/changelog posts; honest live counters when numbers are real
- iOS when Android retention is proven

7. Other solutions worth considering (borrow, don’t vendor)

From your research PDFs and OSS surveys — useful as **patterns**, not as replace-the-stack installs:

Area	Borrow from	CLIVORA fit
CRM UX	Twenty / Monica	Custom fields UI, activity timeline
Invoicing	SolidInvoice / Crater	Client pay link, PDF polish
Marketplace trust	Upwork/Fiverr UX	Response time, badges (data already partial)
Referrals	Refferq-style rules	Already native; extend rewards
Chat polish	Zulip topics / Mattermost	Typing indicators, media gallery only
Workflows	n8n webhook	Already have queue stub — connect when needed
Search	Meilisearch	Optional facets later
AI	LangChain/Haystack patterns	Real RAG on existing pgvector
Admin	Refine / shadcn dashboards	Layout consistency, not a rewrite
Avoid hosting	Keycloak, Rocket.Chat, Discourse, Kill Bill	High ops cost; Supabase covers auth/data

8. Pricing packaging reminder

Free — capped CRM + browse Connect.
Pro $9 — uncapped CRM, reminders, recurring (mobile), AI capped.
Pro Plus $19 — Connect post/contact, milestones/escrow status, verified path, stronger AI caps.
Keep escrow + verified + branded portal as the clearest Plus upgrade levers once funding is live.

9. Suggested AI prompt for the next session

“Using CLIVORA Status v2.15 PDF and RESEARCH_VS_SHIPPED: implement P0 ops verification (OAuth branding checklist + Reminder email E2E + Vercel SERVICE_ROLE if missing). Then build client needs-action dashboard + Connect portfolio gallery. Do not vendor Keycloak/Rocket.Chat. Prefer native Supabase + Next + Flutter. Keep costs low.”
