CLIVORA — AI Research Brief for GitHub Repo Matching

Purpose of this document: Give this entire brief to an AI assistant (ChatGPT, Claude, Cursor, etc.) and ask it to search GitHub for open-source projects that already implement one or more CLIVORA features. The goal is to find repos you can learn from, fork patterns from, or integrate ideas into CLIVORA.

Product: CLIVORA — cloud-first business OS for freelancers + private marketplace (Connect)

Live: https://clivora.codcrafters.org

Repos: https://github.com/UsmanGhias/clivora (Flutter) · https://github.com/UsmanGhias/clivora-web (Next.js)

Version: 2.10.7

Author: Usman Ghias / CODCrafters

How to use this brief (copy-paste prompt for your AI)

```
You are researching GitHub repositories to help improve CLIVORA (freelancer CRM +
private marketplace).

Read the full brief below. For each FEATURE AREA:

1. Search GitHub for mature open-source repos (prefer: active commits, 500+ stars,
clear license, Flutter OR Next.js OR Supabase stack where possible).

2. List top 5–10 repos per area with: repo URL, stars, license, which CLIVORA
feature it matches, and 2–3 sentences on what we could borrow.

3. Note integration difficulty: Easy (drop-in pattern) / Medium (adapt code) /
Hard (different stack).

4. Flag any repo that combines MULTIPLE CLIVORA areas (highest value).

5. Exclude abandoned projects (no commits in 18+ months) unless uniquely relevant.
```

```
Output a ranked table: Feature → Repo → Stars → Match score 1–10 → Notes.
```

What CLIVORA is (simple summary)

CLIVORA is **two things in one product**:

Business OS (CRM) — freelancers manage clients, projects, invoices, expenses, tasks, messages. Works **offline on Android** and **online on web**, synced through **Supabase**.

CLIVORA Connect — a **private marketplace** (like Upwork/Fiverr but safer): browse talent and jobs, send contact requests, emails unlock only after both sides accept. Requires **Pro Plus** plan.

There are **two user types**: **Freelancer** (full CRM) and **Client** (portal to view shared work). One email cannot switch between types.

Pricing: Free (limits) · Pro $9/mo · Pro Plus $19/mo (includes Connect).

Feature areas to match on GitHub

For each area below: **what CLIVORA does today**, **what we want to improve**, and **GitHub search keywords**.

---

1. Freelancer CRM (core)

What we have: Clients, projects, invoices, expenses, notes, tasks, quotes, products, dashboard stats. Local SQLite on Android + cloud `crm_*` tables on Supabase. Web CRUD for clients/projects/invoices.

What to improve: Better UX, kanban projects, CRM pipelines, contact enrichment, duplicate detection, import/export.

Search keywords:

`flutter crm offline`, `freelancer crm app`, `invoice crm supabase`, `small business crm flutter`, `drift sqlite crm`, `nextjs crm dashboard`

Compare against: Twenty CRM, EspoCRM (patterns), Monica HQ (contacts), Invoice Ninja (invoicing).

---

2. Invoicing & payments

What we have: Invoice builder, line items, share links (`invoice_shares`), payment confirmation, recurring invoices (app), PDF generation (app), public token page `/i/[token]` .

What to improve: Stripe/PayPal integration, payment reminders, partial payments UI, multi-currency, tax lines, invoice templates marketplace.

Search keywords:

`flutter invoice pdf` , `invoice ninja flutter` , `supabase invoicing` , `nextjs invoice generator` , `open source invoicing react`

Compare against: Invoice Ninja, Crater App, SolidInvoice, Invoicen.

---

3. Offline-first sync (critical differentiator)

What we have: Drift SQLite, sync outbox, conflict handling for invoices, pull on sign-in, `local_id` mapping to cloud rows.

What to improve: Robust conflict UI, CRDT or version vectors, background sync, sync status per entity.

Search keywords:

`flutter offline first sync` , `drift supabase sync` , `sqlite cloud sync flutter` , `powersync dart` , `electric sql flutter` , `replicache flutter`

Compare against: PowerSync, ElectricSQL, WatermelonDB, Realm sync patterns.

---

4. CLIVORA Connect — private marketplace

What we have: `connect_profiles` , `connect_need_posts` , `connect_requests` , browse/search/filter, inbox accept/decline, email reveal after accept, Pro Plus gate, admin moderation.

What to improve: Reviews/ratings, escrow, milestones, proposals, saved searches, video intro, skill tests, agency teams, dispute flow — compete with Upwork/Fiverr.

Search keywords:

`freelance marketplace open source` , `upwork clone github` , `fiverr clone react` , `talent marketplace supabase` , `job board nextjs` , `gig economy platform flutter`

Compare against: Cal.com (booking patterns), NewPipe irrelevant; look for `lancer` , `worksome` clones, `microlancer` , open job boards with messaging.

---

5. Client portal

What we have: Client account type, slate theme, shared projects/invoices/quotes, client messages, activity feed, client tasks.

What to improve: Branded portal per freelancer, client approval workflows, e-sign, file upload portal.

Search keywords:

`client portal freelancer`, `customer portal nextjs`, `invoice client dashboard`, `white label client portal`

---

6. Messaging & chat

What we have: `client_messages`, Supabase realtime, image attachments, chat blocks, freelancer/client separate UIs.

What to improve: Threads, read receipts, typing indicators, file gallery, in-app voice notes.

Search keywords:

`supabase chat flutter`, `flutter chat realtime`, `nextjs supabase messaging`, `stream chat alternative open source`

---

7. Auth, roles & multi-tenant patterns

What we have: Supabase auth, Google OAuth, `account_type` locked, admin role, blocked/restricted flags, RLS policies.

What to improve: Org/team accounts, SSO, 2FA, audit logs UI.

Search keywords:

`supabase rls multi tenant`, `flutter supabase auth`, `nextjs supabase ssr roles`, `row level security patterns`

---

8. Subscriptions & billing

What we have: Google Play billing (Flutter), manual web checkout, `pro_payment_requests`, `subscriptions` table, plan gates in app + web.

What to improve: Stripe subscriptions on web, unified billing portal, usage-based pricing.

Search keywords:

`flutter in_app_purchase subscription`, `supabase stripe subscription`, `nextjs pricing stripe`, `revenuecat open source alternative`

---

9. Admin panel & moderation

What we have: Web admin: users, block/restrict, grant Pro/Plus, payment approval, Connect moderation, stats, events sync.

What to improve: Better analytics, impersonation, feature flags UI, bulk operations.

Search keywords:

`nextjs admin dashboard supabase`, `react admin panel supabase`, `open source admin tailwind`, `refine dev supabase`

Compare against: Refine, React-Admin, AdminJS with Supabase adapter.

---

10. Time tracking & projects

What we have: Project time entries, milestones, billable-to-invoice (app).

What to improve: Timer widget, timesheet approval, Harvest/Toggl integration.

Search keywords:

`flutter time tracking`, `open source toggl clone`, `project time tracker supabase`

---

11. Reports & analytics

What we have: Basic reports free, export Pro, analytics dashboard, `clivora_events`.

What to improve: Custom report builder, charts library, revenue forecasting.

Search keywords:

`flutter analytics dashboard`, `business intelligence react dashboard`, `metabase embed alternative`

---

12. AI assistant (app)

What we have: Template-based local insights from CRM data (Pro gate), not full LLM chat yet.

What to improve: RAG over client data, invoice draft AI, proposal writer, Connect profile optimizer.

Search keywords:

`flutter llm chat local`, `supabase pgvector rag`, `nextjs ai chat documents`, `open source copilot crm`

---

13. Automations & workflows

What we have: Overdue follow-up, welcome, weekly summary automations, `automation_run_log`.

What to improve: Visual workflow builder (Zapier-like), webhooks, n8n integration.

Search keywords:

`open source workflow automation`, `n8n self hosted`, `trigger action flutter`, `temporal workflow ui`

---

14. File vault & attachments

What we have: File attachments table, vault Pro, chat image storage policies.

What to improve: E2E encryption, S3-compatible storage, document OCR.

Search keywords:

`flutter file manager encrypted`, `supabase storage flutter`, `nextjs upload supabase storage`

---

15. Marketing website & docs

What we have: Next.js landing, pricing, FAQ, `/docs` site, SEO, Play Store CTAs.

What to improve: Blog, changelog, interactive demos, i18n.

Search keywords:

`nextjs saas landing template`, `documentation site nextjs`, `nextra docs`, `mintlify alternative open source`

Tech stack constraints (prefer matching stacks)

Layer	CLIVORA uses
Mobile	Flutter 3.x, Dart, Riverpod, Drift
Web	Next.js 15, React 19, TypeScript, Tailwind
Backend	Supabase (Postgres, Auth, Realtime, Storage)
Deploy	Vercel (web), Google Play (Android)

Priority when ranking repos:

Same stack (Flutter or Next.js + Supabase)

MIT / Apache 2.0 / BSD license

Active maintenance

Feature overlap score

CLIVORA files to inspect (for AI with repo access)

```
lib/routing/app_router.dart

lib/core/constants/plan_limits.dart

lib/data/database/tables.dart

lib/core/services/marketplace/connect_marketplace_service.dart

lib/core/cloud/cloud_crm_repository.dart

web/src/app/connect/page.tsx

web/src/components/connect/ConnectBoard.tsx

web/src/lib/crm/api.ts

supabase/migrations/
```

Output format requested from AI

For each feature area, produce:

```
## [Feature area name]

| Rank | Repository | Stars | License | Match (1-10) | Difficulty | What to borrow
|

|------|------------|-------|---------|--------------|------------|---------------
-|

| 1 | ... | ... | MIT | 9 | Medium | ... |
```

Then a **Top 10 overall** list of repos that cover the most CLIVORA surface area.

Success criteria

Research is successful if you end with:

At least **3 strong repo candidates per major area** (CRM, invoicing, marketplace, offline sync).

At least **5 repos** that combine marketplace + messaging or CRM + invoicing.

Clear **next steps**: which repo to spike first, estimated effort, license risk.

Non-goals

Do not recommend illegal scrapers or ToS-violating Upwork/Fiverr bots.

Do not recommend repos with no license.

Prefer self-hostable / OSS over SaaS-only APIs unless integration is trivial.
