CLIVORA — Features Implemented & Improvement Roadmap

For AI research / product discussion

Product: CLIVORA (Flutter Android + Next.js web + Supabase)

Version: 2.13.0

Live web: https://clivora.codcrafters.org

Company: CODCrafters

Give this PDF to your AI and ask: *"Rank the improvement ideas by user impact vs engineering effort for a freelancer OS + private marketplace. Propose a next sprint."*

---

1. What CLIVORA is today

CLIVORA is a **business operating system** for freelancers and clients:

CRM — clients, projects, invoices, expenses, notes, tasks
CLIVORA Connect — private marketplace (contact unlocks only after mutual accept)
Client portal — shared work, invoices, messages
One account — web + Android (offline CRM on Android)

Plans: Free (limits) · Pro $9/mo · Pro Plus $19/mo (Connect posting/contact)

---

2. Features already implemented (shipped)

2.1 Authentication & accounts

Email/password + Google sign-in (web OAuth + Android native Google Sign-In)
Freelancer vs Client account types (locked per email)
Email verification soft gate
Blocked / restricted account enforcement on web + app
MFA guidance (TOTP via Supabase Auth) + biometric app lock (Pro, Android)

2.2 Freelancer CRM (Android primary, web cloud)

Clients, projects, invoices, expenses, notes, products, quotes
Offline SQLite (Drift) + sync outbox to Supabase `crm_*`
Last-write-wins conflict triggers + generalized conflict records
Project **pipeline / kanban** (web + Android)
Partial payments / payment allocations + invoice status `partial`

Tax lines field on cloud invoices
Custom fields (JSONB) editor on web clients
Time tracking (Android) + cloud timesheets with approve/reject (web)

2.3 Invoices & sharing

Invoice builder, PDF (Android), public share link `/i/[token]`
Recurring invoices (Android)
Client payment confirmation flows
Reminder fields (`reminder_sent_at` , `next_reminder_at`) ready for scheduler

2.4 CLIVORA Connect marketplace

Public board: Talent / Jobs / Inbox
Skill filters, sort, search (Postgres; Meilisearch helper when configured)
Private Connect requests → accept → reveal email
Profile manage + job posts (Pro Plus)
Reviews (1–5), **proposals**, **milestones** status machine
Escrow ledger + admin release API (fund/release path)
Restricted users: browse only

2.5 Messaging

Freelancer ↔ client cloud messages
Threads (`parent_message_id`), read receipts (`read_at`), attachments metadata
Web thread UI with reply + mark read

2.6 Web app & marketing

Landing, Connect marketing, pricing, FAQ, help center `/docs`
Authenticated `/app` CRM + Hub + Account
Timesheets, Meetings (Jitsi room links), Support tickets
Smart App CTA (install / open Android)
Role themes: freelancer teal vs client slate

2.7 Billing

Google Play Billing (Android Pro / Pro Plus)
Web manual checkout (JazzCash / Easypaisa / bank)
Stripe Checkout + webhook **stubs** (activate with `STRIPE_*` secrets)
No re-pay when already Pro / Pro Plus

2.8 Admin

Users: block / restrict
Payment request approval → grant plan
Connect moderation + auto-approve toggles

Feature flags editor
Escrow milestone release
Stats / events / audit

2.9 AI & automations (foundation)

Ask AI Hub widget + `/api/ai/ask` (Pro-gated; RAG stub over `crm_embeddings`)
`pgvector` + `crm_embeddings` table ready
n8n / automation webhook queue API
Local Android AI insights (template-based)

2.10 Files & meetings

Vault share links API (signed token + expiry)
Meeting links stored as Jitsi URLs
Chat attachment storage policies

---

3. Best improvements to discuss with AI (prioritized)

Score each idea for **impact**, **effort**, **risk**, and **monetization**.

P0 — Trust & conversion (do next)

Idea	Why it matters
Finish Google OAuth branding (CLIVORA name, not supabase.co)	First-session trust
Stripe live web subscriptions + Customer Portal	Global paid conversion
Connect reviews shown on public talent cards	Marketplace trust vs Upwork
Payment reminder Edge Function cron	Reduces unpaid invoices
Conflict-resolution UI for all CRM entities	Protect offline differentiator

P1 — Marketplace depth

Idea	Why it matters
Escrow fund via Stripe Connect / payment intent	Real money protection
Proposals → contract → milestone auto-create	Smooth hire flow
Meilisearch live index + facets in production	Fast talent/job discovery
Saved searches + email alerts	Retention
Verified badge workflow end-to-end	Quality signal

P2 — CRM power

Idea	Why it matters
Custom field builder UI (Twenty-style)	Agency flexibility
Recurring invoices parity on web	Desktop power users
Multi-currency tax rules	International freelancers
Client branded portal (logo/colors per freelancer)	White-label Plus
Team seats complete (invite → accept → ACL)	Agency plan

P3 — AI & automation

Idea	Why it matters
Real RAG: embed clients/projects/invoices on write	Pro AI that feels magical
Invoice draft from chat / Connect brief	Time saved
Connect profile optimizer (skills + rate suggestions)	Better listings
Visual n8n recipes for overdue / welcome / weekly summary	Non-engineer ops
Proposal writer from job post	Win rate

P4 — Polish & platform

Idea	Why it matters
Typing indicators + media gallery in chat	Modern messaging
Legal e-sign (hash + IP already stored) UX polish	Contracts
i18n (UR / EN)	Pakistan + global
Changelog / blog for SEO	Growth
Play AAB continuous release + crash reporting	Quality

---

4. Prompt to paste into ChatGPT / Claude / Cursor

```
You are a product + eng advisor for CLIVORA (freelancer CRM + private marketplace).

Read the attached features PDF (v2.13).

1) Rank the P0–P4 improvement ideas by Impact × (1/Effort) for the next 4 sprints.

2) For the top 5, specify: Flutter vs Web vs Supabase work, schema changes, and acceptance tests.
```

```
3) Call out any security/compliance risks (escrow, OAuth branding, PII).

4) Propose pricing packaging: what stays Free / Pro / Pro Plus after these ships.

5) Do NOT suggest replacing Supabase with Keycloak/Rocket.Chat/Discourse — prefer
native patterns.
```

---

5. Technical stack (for engineers)

Layer	Stack
Mobile	Flutter, Riverpod, Drift, Google Sign-In, Play Billing
Web	Next.js 15, React 19, Tailwind, Recharts
Backend	Supabase Auth, Postgres RLS, Realtime, Storage, Edge Functions
Deploy	Vercel (`clivora.codcrafters.org`), Google Play

Repos: `github.com/UsmanGhias/clivora` · `github.com/UsmanGhias/clivora-web`

---

6. Env vars checklist (production)

Vercel (project `clivora`):

`NEXT_PUBLIC_SUPABASE_URL`
`NEXT_PUBLIC_SUPABASE_ANON_KEY` (or publishable)
`SUPABASE_SERVICE_ROLE_KEY` (server only — never public)
Optional: `STRIPE_SECRET_KEY`, `STRIPE_WEBHOOK_SECRET`, `MEILI_HOST`, `MEILI_KEY`, `AUTOMATION_WEBHOOK_SECRET`, `N8N_WEBHOOK_URL`

Supabase Auth Dashboard: Site URL + Redirect allowlist → `https://clivora.codcrafters.org/**`

Google Cloud: OAuth consent App name = **CLIVORA**, publish app, logo + privacy/terms links.
